

OSRAM AirZing™ Mini

The global pandemic around Coronavirus (Covid-19) has made everyone aware of the need for good hygiene. Vehicle cabins whether it is a car, van or truck is an area that requires special attention. By purifying the air in the vehicle, drivers and passengers get fresh, clean air. Purifying the air can not only eliminate odors and bad smells, but can remove bacteria and viruses.

Utilizing OSRAM's knowledge of UV light, OSRAM have produced the in-car AirZing Mini to kill bacteria and viruses, purifying the air within cars. The AirZing Mini draws in the cabin air from the base of the unit and passes it over a Titanium Dioxide Plate that combined with the UV-A light to produce a photonic-catalytic reaction, purifying the air.

Designed specifically to fit within a vehicle cabin, the AirZing Mini is small for discreet positioning. Once plugged in, the unit will immediately start to draw in air to purify the atmosphere within the vehicle, reducing harmful bacteria and viruses. This is added peace of mind and reassurance as we live in a world focused on improving hygiene levels.

FEATURES

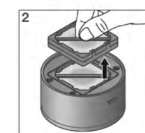

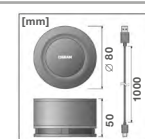

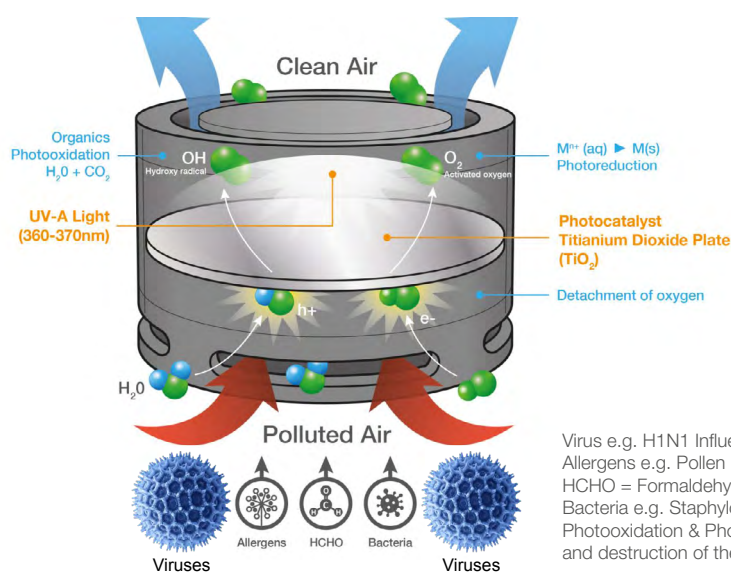

- Continuous filtration & air purification whilst you drive
- Ioniser - helps clean the air
- UVA LED light source
- Titanium dioxide filter is washable - no need to replace
- Unobtrusive - Quiet operation & compact size
- Convenient - plugs into 5VDC USB-C socket (cable included)

BENEFITS

- Kills viruses and bacteria helping you protect and stay safe while driving in a vehicle
- Can filter the air in a typical car interior in around 30 minutes
- Eliminates some odours replacing with clean air for a fresh atmosphere
- Low level maintenance, no need to buy or continually replace filters
- Flexible mounting positions and secure fit power supply
